**GREEN DIESEL
TECHNOLOGY[®]**
by INTERNATIONAL

Answer – A registered trademark of International Truck and Engine Corporation.

International Truck & Engine Corporation The Engine Technology Leader

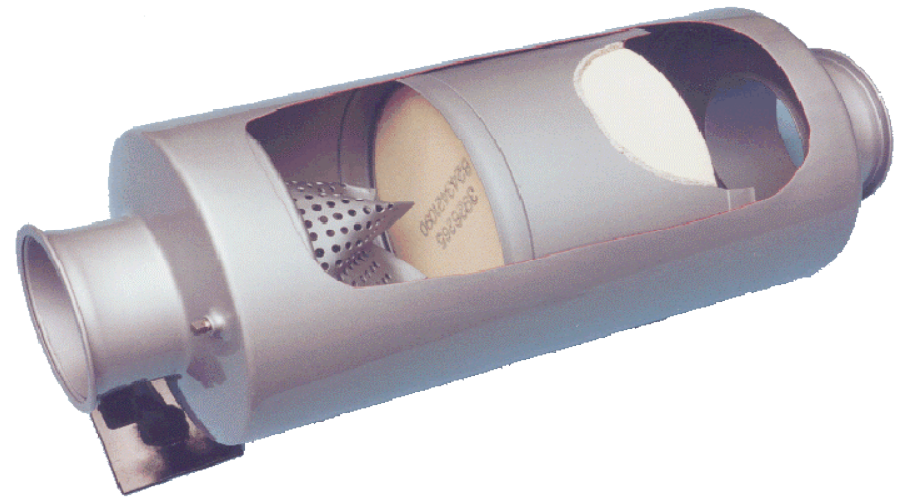

- **RETROFIT DEVICE:**

- Any technology that allows reduction of Particulate Matter and/or NOx in diesel exhaust. This includes aftermarket devices, re-power and replacement.

Diesel Oxidation Catalyst

- **Particulate matter reduction of 20% to 30%**
- **Carbon monoxide (CO) and hydrocarbon (HC) reductions of up to 50%**
- **Harmful hydrocarbons (HC) are also reduced by up to 50%**
- **No specialized fuel required**
- **Recommended for older, mechanical engines built before 1994**

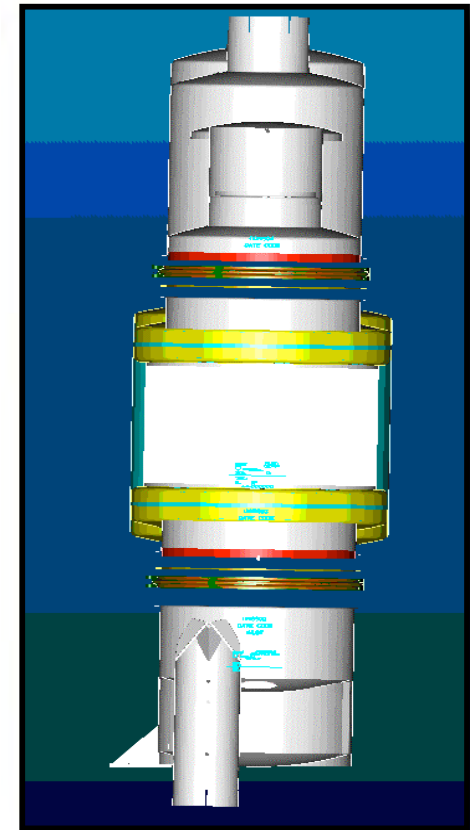

Green Diesel Technology®

Particulate Reactor (ARB – Level II device)

- ARB verified level II device
- Good candidate for city buses, refuse hauling and military applications.
- 50 % minimum PM removal with flow through design.

Diesel Particulate Filter

- **International® Diesel Particulate Filters (DPF) utilize the latest advancements in emission control technology from Engelhard, a world leader in emission technology and are OEM engineered and manufactured for quality and durability.**
- **Emission Reduction Performance:**
 - 70-98% reduction in particulate matter (PM) and visible smoke; depending on fuel quality
- 70-98% reduction in carbon monoxide (CO) and hydrocarbons (HC)
- Reduced odor and noise
- **DPFs from International are passive systems and allow oxidation of PM at normal operating temperatures.**
 - .
- **Warranty:**
- Diesel Particulate Filter kits are warranted for (5) five years or 100,000 miles from date of installation.

Green Diesel Technology®

International Closed Crankcase Ventilation System (CCV)

- OEM designed system
- Sold as a complete kit
- Element life is 750 Hour Min.
- Easy installation and service
- Includes drain valve and hose in the kit.
- Verification pending with USA EPA.

Active Catalyst Technology

Therma Cat™

- Therma Cat™ Level III, 85%+ Particulate Reductions
 - Verification pending at CARB
 - Will be an active system with low temperature requirements.
- Distributed exclusively through authorized International and IC dealers worldwide.

Green Diesel Technology [®]

- Engine recalibration – change timing.
(2000-2003 years of International engines only)
- Reduction in combustion temperature.
- Reduction in NO_x emissions by 25%.
- Reduction in PM Emissions two fold.

Good

Diesel Oxidation Catalyst (DOC)

G07-5035-A

1 step

- DOC only required

Applications:

Mechanical engines built before 1994 (All – makes)

Benefits:

20 to 25% PM reduction

Better

Particulate Filter (Retrofit Kit)

G07-5036-A

2 step

- Particulate Filter required
- Ultra low sulfur fuel (15ppm)

Applications:

Electronic engines built after 1994 (All Makes)

Benefits:

**90 % plus PM reduction
5 to 10 % NOx reduction**

Best

Green Diesel Upgrade (GDT)

G07-5701-A

3 step

- Particulate Filter required
- Ultra-low sulfur fuel (15ppm)
- Engine Re-calibration

Applications:

Electronic engines built 1999 to 2003 (International only)

Benefits:

**Over 90 % PM reduction
Minimum 25% NOx reduction**
